Instructions to download The South West Australia Way onto your device

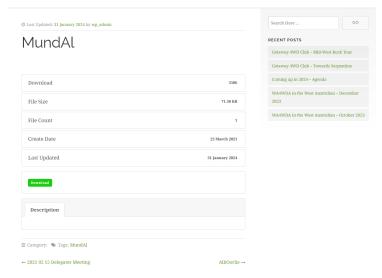

Visit the WA4WD association webpage at https://www.wa4wda.com.au/services/

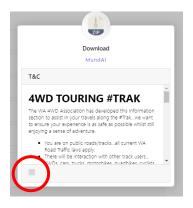

Scroll down to find the track section you wish to download

Click on the "Download" hyperlink next to that section to open the download page

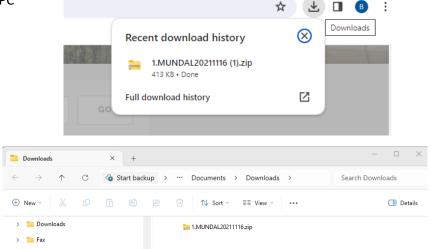

• Click on the green download button to open the T & C page

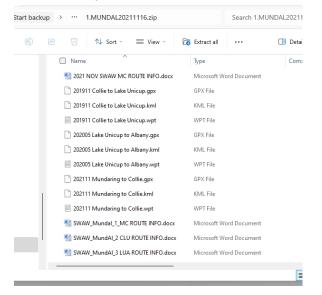

- Read the T & C. If you agree to the T & C click on the checkbox at the lower left. If you don't agree exit the
 website
- Click on the green download button to download the zip file

 The zip file will on your PC now be in your Download folder

Double click on the downloaded zip file to view the contents

The files can now be copied into your filing system on your PC. The Word documents have all the trip details
and directions, The waypoint files are to be downloaded to your chosen navigation device:
The GPX files are suitable for most navigation devices such as Garmin, Hema HX1 and HX2
The WPT files are for devices running Oziexplorer such as Hema7 and Android devices
The KML files are for Google Earth

To Import A GPX File To A Hema HX2 Navigator

There are 2 ways to import the GPX files that you have just downloaded from the WA4WD association webpage:

- 1. Upload the files to the Hema Cloud and synch your device. This method will not be discussed in this document as it only applies to people that have a Hema Cloud account.
- 2. Import the GPX files directly into the device.

The procedure I have shown here has been sourced from the Hema Knowledgebase webpage located here

HX-2 - How Do I Import A GPX File??

You can import a GPX file to the HX-2 two ways.

Import GPX file on the HX-2

The first way is on the unit itself. To do this you will need to copy the GPX file/s to an SD Card and then insert the SD Card into the HX-2.

Step 1:

Click on the Main menu [1] in the top left hand corner.

Step 2:

When the main menu opens scroll down and click on Import GPX file [2].

Step 3:

When the Import GPX page loads click on Select file [3].

Step 4:

When the Select file page loads click on Menu [4].

Step 5:

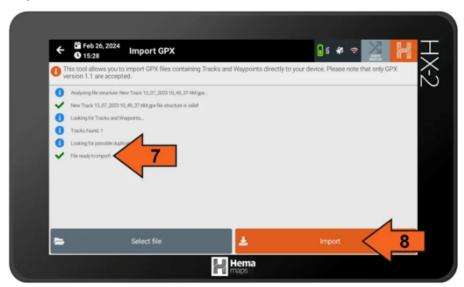

When the Menu opens select your SD Card for the list of storage devices [5].

Step 6:

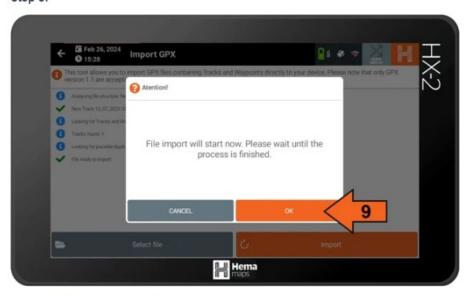

You will now see the files on your SD Card and you can pick the file you wish to import by

Step 7:

You will now be taken back to the Import GPX page, and when you see the notification that File ready to import! [7], click on the Import [8] button in the bottom right.

Step 8:

Click OK [9] to proceed with the import.

Step 9:

Click OK [10] to proceed with the import.

Step 10:

To view your imported track on your HX-2 click on the Main menu [11].

Step 11:

From the main menu click on the Tracks [12].

Step 12:

When the Tracks page loads click on track you would like to view [13].

Step 13:

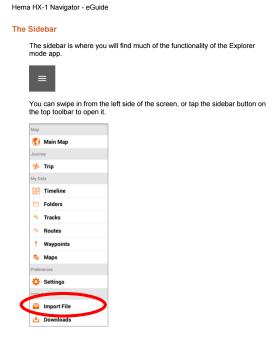

To view your track on the map click on View on map [14]. You can also continue the track, Edit the track details and also Delete the track from here.

To Import A GPX File To A Hema HX1 Navigator

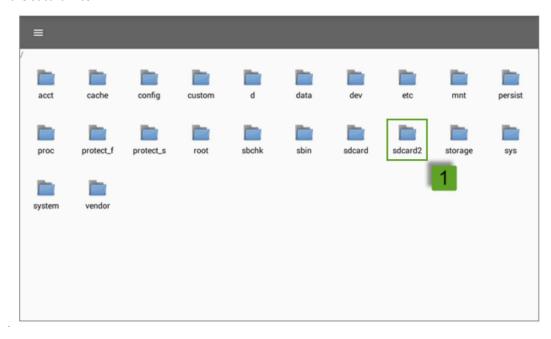

There are 2 ways to import the GPX files that you have just downloaded from the WA4WD association webpage:

- 1. Upload the files to the Hema Cloud and synch your device. This method will not be discussed in this document as the Hema Cloud for the HX1 will be decommissioned in the near future.
- 2. Import the GPX files directly into the device.

- Copy the GPX files you downloaded onto an SD card
- Insert the SD card into the HX-1
- Start up the HX-1 and select the Explore option from the welcome screen
- Open the side bar by swiping the screen from the left hand side or tapping the sidebar button at the top left hand corner of the screen

- Tap on the Import option to open a file explorer type page
- Tap on the sdcard2 icon

- Tap on the file you want to import
- Exit back to the Explorer App. The Waypoints will be displayed on the map
